

# Scan Report

March 29, 2024

## Summary

This document reports on the results of an automatic security scan. All dates are displayed using the timezone “Coordinated Universal Time”, which is abbreviated “UTC”. The task was “Immediate scan of IP 10.10.92.0/24”. The scan started at Thu Mar 28 23:34:00 2024 UTC and ended at Fri Mar 29 00:35:59 2024 UTC. The report first summarises the results found. Then, for each host, the report describes every issue found. Please consider the advice given in each description, in order to rectify the issue.

| 2.2.3    | Medium 21/tcp . . . . .    | 12       |
| 2.2.4    | Medium 80/tcp . . . . .    | 13       |
| 2.2.5    | Low general/tcp . . . . .  | 14       |
| 2.2.6    | Low general/icmp . . . . . | 15       |
| 2.2.7    | Low 22/tcp . . . . .       | 16       |
| 2.3      | 10.10.92.2 . . . . .       | 17       |
| 2.3.1    | Low general/icmp . . . . . | 18       |
| 2.3.2    | Low 22/tcp . . . . .       | 19       |
| 2.3.3    | Low general/tcp . . . . .  | 20       |
| 2.4      | 10.10.92.20 . . . . .      | 21       |
| 2.4.1    | Low 22/tcp . . . . .       | 21       |

|       |                  |    |
|-------|------------------|----|
| 2.4.2 | Low general/tcp  | 22 |
| 2.4.3 | Low general/icmp | 23 |
| 2.5   | 10.10.92.1       | 24 |
| 2.5.1 | Low general/icmp | 25 |

## 1 Result Overview

| Host                        | High | Medium | Low | Log | False Positive |
|-----------------------------|------|--------|-----|-----|----------------|
| <a href="#">10.10.92.10</a> | 1    | 0      | 3   | 0   | 0              |
| <a href="#">10.10.92.26</a> | 1    | 4      | 3   | 0   | 0              |
| <a href="#">10.10.92.2</a>  | 0    | 0      | 3   | 0   | 0              |
| <a href="#">10.10.92.20</a> | 0    | 0      | 3   | 0   | 0              |
| <a href="#">10.10.92.1</a>  | 0    | 0      | 1   | 0   | 0              |
| Total: 5                    | 2    | 4      | 13  | 0   | 0              |

Vendor security updates are not trusted.

Overrides are off. Even when a result has an override, this report uses the actual threat of the result.

Information on overrides is included in the report.

Notes are included in the report.

This report might not show details of all issues that were found.

Issues with the threat level “Log” are not shown.

Issues with the threat level “Debug” are not shown.

Issues with the threat level “False Positive” are not shown.

Only results with a minimum QoD of 70 are shown.

This report contains all 19 results selected by the filtering described above. Before filtering there were 204 results.

## 2 Results per Host

### 2.1 10.10.92.10

Host scan start Thu Mar 28 23:35:32 2024 UTC  
Host scan end Thu Mar 28 23:51:41 2024 UTC

| Service (Port)               | Threat Level |
|------------------------------|--------------|
| <a href="#">4444/tcp</a>     | High         |
| <a href="#">22/tcp</a>       | Low          |
| <a href="#">general/icmp</a> | Low          |
| <a href="#">general/tcp</a>  | Low          |

#### 2.1.1 High 4444/tcp

|   |
|---|
| High (CVSS: 10.0)   |
| NVT: Possible Backdoor: Ingreslock  |
| <b>Summary</b><br>A backdoor is installed on the remote host.   |
| <b>Quality of Detection:</b> 99   |
| <b>Vulnerability Detection Result</b><br>The service is answering to an 'id;' command with the following response: uid=0(<br>↪root) gid=0(root)                             |
| <b>Impact</b><br>Attackers can exploit this issue to execute arbitrary commands in the context of the application. Successful attacks will compromise the affected isystem. |
| <b>Solution:</b><br><b>Solution type:</b> Workaround<br>A whole cleanup of the infected system is recommended.  |
| <b>Vulnerability Detection Method</b><br>Details: Possible Backdoor: Ingreslock<br>OID:1.3.6.1.4.1.25623.1.0.103549<br>Version used: 2023-07-25T05:05:58Z                   |

### 2.1.2 Low 22/tcp

|  |
|--|
| Low (CVSS: 2.6)  |
| NVT: Weak MAC Algorithm(s) Supported (SSH)   |
| <b>Summary</b><br>The remote SSH server is configured to allow / support weak MAC algorithm(s).  |
| <b>Quality of Detection:</b> 80  |
| <b>Vulnerability Detection Result</b><br>The remote SSH server supports the following weak client-to-server MAC algorithm<br>↪(s):<br>umac-64-etm@openssh.com<br>umac-64@openssh.com<br>... continues on next page ... |

|   |
|---|
| ...continued from previous page ...   |
| <p>The remote SSH server supports the following weak server-to-client MAC algorithm <math>\hookrightarrow</math>(s):</p> <pre>umac-64-etm@openssh.com umac-64@openssh.com</pre>   |
| <p><b>Solution:</b><br/> <b>Solution type:</b> Mitigation<br/> Disable the reported weak MAC algorithm(s).</p>  |
| <p><b>Vulnerability Detection Method</b><br/> Checks the supported MAC algorithms (client-to-server and server-to-client) of the remote SSH server.<br/> Currently weak MAC algorithms are defined as the following:</p> <ul style="list-style-type: none"> <li>- MD5 based algorithms</li> <li>- 96-bit based algorithms</li> <li>- 64-bit based algorithms</li> <li>- 'none' algorithm</li> </ul> <p>Details: Weak MAC Algorithm(s) Supported (SSH)<br/> OID:1.3.6.1.4.1.25623.1.0.105610<br/> Version used: 2023-10-12T05:05:32Z</p> |
| <p><b>References</b><br/> url: <a href="https://www.rfc-editor.org/rfc/rfc6668">https://www.rfc-editor.org/rfc/rfc6668</a><br/> url: <a href="https://www.rfc-editor.org/rfc/rfc4253#section-6.4">https://www.rfc-editor.org/rfc/rfc4253#section-6.4</a></p>  |

[ [return to 10.10.92.10](#) ]

### 2.1.3 Low general/icmp

|   |
|---|
| Low (CVSS: 2.1)   |
| NVT: ICMP Timestamp Reply Information Disclosure  |
| <p><b>Summary</b><br/> The remote host responded to an ICMP timestamp request.</p>  |
| <p><b>Quality of Detection:</b> 80</p>  |
| <p><b>Vulnerability Detection Result</b><br/> The following response / ICMP packet has been received:</p> <ul style="list-style-type: none"> <li>- ICMP Type: 14</li> <li>- ICMP Code: 0</li> </ul> |
| <p><b>Impact</b></p>  |
| ... continues on next page ...  |

|   |
|---|
| ...continued from previous page ...   |
| This information could theoretically be used to exploit weak time-based random number generators in other services.   |
| <b>Solution:</b><br><b>Solution type:</b> Mitigation<br>Various mitigations are possible:<br>- Disable the support for ICMP timestamp on the remote host completely<br>- Protect the remote host by a firewall, and block ICMP packets passing through the firewall in either direction (either completely or only for untrusted networks)                    |
| <b>Vulnerability Insight</b><br>The Timestamp Reply is an ICMP message which replies to a Timestamp message. It consists of the originating timestamp sent by the sender of the Timestamp as well as a receive timestamp and a transmit timestamp.  |
| <b>Vulnerability Detection Method</b><br>Sends an ICMP Timestamp (Type 13) request and checks if a Timestamp Reply (Type 14) is received.<br>Details: ICMP Timestamp Reply Information Disclosure<br>OID:1.3.6.1.4.1.25623.1.0.103190<br>Version used: 2023-05-11T09:09:33Z   |
| <b>References</b><br>cve: CVE-1999-0524<br>url: <a href="https://datatracker.ietf.org/doc/html/rfc792">https://datatracker.ietf.org/doc/html/rfc792</a><br>url: <a href="https://datatracker.ietf.org/doc/html/rfc2780">https://datatracker.ietf.org/doc/html/rfc2780</a><br>cert-bund: CB-K15/1514<br>cert-bund: CB-K14/0632<br>dfn-cert: DFN-CERT-2014-0658 |

[ [return to 10.10.92.10](#) ]

#### 2.1.4 Low general/tcp

|   |
|---|
| Low (CVSS: 2.6)   |
| NVT: TCP Timestamps Information Disclosure  |
| <b>Summary</b><br>The remote host implements TCP timestamps and therefore allows to compute the uptime. |
| <b>Quality of Detection:</b> 80   |
| <b>Vulnerability Detection Result</b>   |
| ... continues on next page ...  |

|   |
|---|
| ...continued from previous page...  |
| <p>It was detected that the host implements RFC1323/RFC7323.</p> <p>The following timestamps were retrieved with a delay of 1 seconds in-between:</p> <p>Packet 1: 2552946809</p> <p>Packet 2: 2552947973</p>   |
| <p><b>Impact</b></p> <p>A side effect of this feature is that the uptime of the remote host can sometimes be computed.</p>  |
| <p><b>Solution:</b></p> <p><b>Solution type:</b> Mitigation</p> <p>To disable TCP timestamps on linux add the line 'net.ipv4.tcp_timestamps = 0' to /etc/sysctl.conf. Execute 'sysctl -p' to apply the settings at runtime.</p> <p>To disable TCP timestamps on Windows execute 'netsh int tcp set global timestamps=disabled'</p> <p>Starting with Windows Server 2008 and Vista, the timestamp can not be completely disabled.</p> <p>The default behavior of the TCP/IP stack on this Systems is to not use the Timestamp options when initiating TCP connections, but use them if the TCP peer that is initiating communication includes them in their synchronize (SYN) segment.</p> <p>See the references for more information.</p> |
| <p><b>Affected Software/OS</b></p> <p>TCP implementations that implement RFC1323/RFC7323.</p>   |
| <p><b>Vulnerability Insight</b></p> <p>The remote host implements TCP timestamps, as defined by RFC1323/RFC7323.</p>  |
| <p><b>Vulnerability Detection Method</b></p> <p>Special IP packets are forged and sent with a little delay in between to the target IP. The responses are searched for a timestamps. If found, the timestamps are reported.</p> <p>Details: TCP Timestamps Information Disclosure</p> <p>OID:1.3.6.1.4.1.25623.1.0.80091</p> <p>Version used: 2023-12-15T16:10:08Z</p>  |
| <p><b>References</b></p> <p>url: <a href="https://datatracker.ietf.org/doc/html/rfc1323">https://datatracker.ietf.org/doc/html/rfc1323</a></p> <p>url: <a href="https://datatracker.ietf.org/doc/html/rfc7323">https://datatracker.ietf.org/doc/html/rfc7323</a></p> <p>url: <a href="https://web.archive.org/web/20151213072445/http://www.microsoft.com/en-us/download/details.aspx?id=9152">https://web.archive.org/web/20151213072445/http://www.microsoft.com/en-us/download/details.aspx?id=9152</a></p> <p>url: <a href="https://www.fortiguard.com/psirt/FG-IR-16-090">https://www.fortiguard.com/psirt/FG-IR-16-090</a></p>  |

## 2.2 10.10.92.26

Host scan start Thu Mar 28 23:35:32 2024 UTC  
 Host scan end Fri Mar 29 00:19:47 2024 UTC

| Service (Port)               | Threat Level |
|------------------------------|--------------|
| <a href="#">443/tcp</a>      | High         |
| <a href="#">443/tcp</a>      | Medium       |
| <a href="#">21/tcp</a>       | Medium       |
| <a href="#">80/tcp</a>       | Medium       |
| <a href="#">general/tcp</a>  | Low          |
| <a href="#">general/icmp</a> | Low          |
| <a href="#">22/tcp</a>       | Low          |

### 2.2.1 High 443/tcp

|   |
|---|
| High (CVSS: 7.5)  |
| NVT: CS Whois Lookup RCE Vulnerability (Apr 2009) - Active Check  |
| <b>Summary</b><br>CS Whois Lookup and CS DNS Lookup are prone to a remote command execution (RCE) vulnerability because the software fails to adequately sanitize user-supplied input.  |
| <b>Quality of Detection:</b> 99   |
| <b>Vulnerability Detection Result</b><br>The following URLs are affected:<br><a href="https://10.10.92.26/index.php?ip=;/bin/cat%20/etc/passwd">https://10.10.92.26/index.php?ip=;/bin/cat%20/etc/passwd</a>  |
| <b>Impact</b><br>Successful attacks can compromise the affected software and possibly the computer.   |
| <b>Solution:</b><br><b>Solution type:</b> WillNotFix<br>No known solution was made available for at least one year since the disclosure of this vulnerability. Likely none will be provided anymore. General solution options are to upgrade to a newer release, disable respective features, remove the product or replace the product by another one. |
| <b>Vulnerability Detection Method</b><br>Sends a crafted HTTP GET request and checks the response.<br>Details: CS Whois Lookup RCE Vulnerability (Apr 2009) - Active Check<br>OID:1.3.6.1.4.1.25623.1.0.100166<br>Version used: 2023-12-22T16:09:03Z  |

| NVT: SSL/TLS: Deprecated TLSv1.0 and TLSv1.1 Protocol Detection   |
| <b>Summary</b><br>It was possible to detect the usage of the deprecated TLSv1.0 and/or TLSv1.1 protocol on this system.   |
| <b>Quality of Detection: 98</b>   |
| <b>Vulnerability Detection Result</b><br>In addition to TLSv1.2+ the service is also providing the deprecated TLSv1.0 and<br>↪ TLSv1.1 protocols and supports one or more ciphers. Those supported ciphers c<br>↪an be found in the 'SSL/TLS: Report Supported Cipher Suites' (OID: 1.3.6.1.4.1<br>↪.25623.1.0.802067) VT.      |
| <b>Impact</b><br>An attacker might be able to use the known cryptographic flaws to eavesdrop the connection between clients and the service to get access to sensitive data transferred within the secured connection.<br>Furthermore newly uncovered vulnerabilities in this protocols won't receive security updates anymore. |
| <b>Solution:</b><br><b>Solution type:</b> Mitigation<br>It is recommended to disable the deprecated TLSv1.0 and/or TLSv1.1 protocols in favor of the TLSv1.2+ protocols. Please see the references for more information.  |
| <b>Affected Software/OS</b><br>All services providing an encrypted communication using the TLSv1.0 and/or TLSv1.1 protocols.  |
| <b>Vulnerability Insight</b><br>The TLSv1.0 and TLSv1.1 protocols contain known cryptographic flaws like:<br>- CVE-2011-3389: Browser Exploit Against SSL/TLS (BEAST)<br>- CVE-2015-0204: Factoring Attack on RSA-EXPORT Keys Padding Oracle On Downgraded Legacy Encryption (FREAK)  |
| <b>Vulnerability Detection Method</b><br>Check the used TLS protocols of the services provided by this system.<br>Details: SSL/TLS: Deprecated TLSv1.0 and TLSv1.1 Protocol Detection<br>OID:1.3.6.1.4.1.25623.1.0.117274<br>Version used: 2023-10-20T16:09:12Z   |

Medium (CVSS: 4.8)

NVT: FTP Unencrypted Cleartext Login

**Summary**

The remote host is running a FTP service that allows cleartext logins over unencrypted connections.

**Quality of Detection:** 70**Vulnerability Detection Result**

The remote FTP service accepts logins without a previous sent 'AUTH TLS' command ↩. Response(s):

Non-anonymous sessions: 331 Please specify the password.

Anonymous sessions: 331 Please specify the password.

**Impact**

An attacker can uncover login names and passwords by sniffing traffic to the FTP service.

**Solution:**

**Solution type:** Mitigation

Enable FTPS or enforce the connection via the 'AUTH TLS' command. Please see the manual of the FTP service for more information.

**Vulnerability Detection Method**

### 2.2.5 Low general/tcp

|   |
|---|
| Low (CVSS: 2.6)   |
| NVT: TCP Timestamps Information Disclosure  |
| <b>Summary</b><br>The remote host implements TCP timestamps and therefore allows to compute the uptime.   |
| <b>Quality of Detection: 80</b>   |
| <b>Vulnerability Detection Result</b><br>It was detected that the host implements RFC1323/RFC7323.<br>The following timestamps were retrieved with a delay of 1 seconds in-between:<br>Packet 1: 2249769633<br>Packet 2: 2249770765 |
| ... continues on next page ...  |

|   |   |
|---|---|
| ...continued from previous page...  |   |
| <b>Impact</b>   | A side effect of this feature is that the uptime of the remote host can sometimes be computed.  |
| <b>Solution:</b>  |   |
| <b>Solution type:</b> Mitigation  |   |
| <p>To disable TCP timestamps on linux add the line 'net.ipv4.tcp_timestamps = 0' to /etc/sysctl.conf. Execute 'sysctl -p' to apply the settings at runtime.</p> <p>To disable TCP timestamps on Windows execute 'netsh int tcp set global timestamps=disabled' Starting with Windows Server 2008 and Vista, the timestamp can not be completely disabled. The default behavior of the TCP/IP stack on this Systems is to not use the Timestamp options when initiating TCP connections, but use them if the TCP peer that is initiating communication includes them in their synchronize (SYN) segment.</p> <p>See the references for more information.</p> |   |
| <b>Affected Software/OS</b>   | TCP implementations that implement RFC1323/RFC7323.   |
| <b>Vulnerability Insight</b>  | The remote host implements TCP timestamps, as defined by RFC1323/RFC7323.   |
| <b>Vulnerability Detection Method</b>   | <p>Special IP packets are forged and sent with a little delay in between to the target IP. The responses are searched for a timestamps. If found, the timestamps are reported.</p> <p>Details: TCP Timestamps Information Disclosure</p> <p>OID:1.3.6.1.4.1.25623.1.0.80091</p> <p>Version used: 2023-12-15T16:10:08Z</p>   |

### 2.3.2 Low 22/tcp

Low (CVSS: 2.6)

NVT: Weak MAC Algorithm(s) Supported (SSH)

#### Summary

The remote SSH server is configured to allow / support weak MAC algorithm(s).

**Quality of Detection:** 80

#### Vulnerability Detection Result

The remote SSH server supports the following weak client-to-server MAC algorithm  $\hookrightarrow$ (s):

umac-64-etm@openssh.com  
 umac-64@openssh.com

The remote SSH server supports the following weak server-to-client MAC algorithm  $\hookrightarrow$ (s):

umac-64-etm@openssh.com  
 umac-64@openssh.com

#### Solution:

**Solution type:** Mitigation

Disable the reported weak MAC algorithm(s).

#### Vulnerability Detection Method

Checks the supported MAC algorithms (client-to-server and server-to-client) of the remote SSH server.

Currently weak MAC algorithms are defined as the following:

- MD5 based algorithms
- 96-bit based algorithms
- 64-bit based algorithms
- 'none' algorithm

Details: Weak MAC Algorithm(s) Supported (SSH)

| <b>Summary</b><br>The remote host implements TCP timestamps and therefore allows to compute the uptime.  |
| <b>Quality of Detection:</b> 80  |
| <b>Vulnerability Detection Result</b><br>It was detected that the host implements RFC1323/RFC7323.<br>The following timestamps were retrieved with a delay of 1 seconds in-between:<br>Packet 1: 4183258962<br>Packet 2: 4183260114  |
| <b>Impact</b><br>A side effect of this feature is that the uptime of the remote host can sometimes be computed.  |
| <b>Solution:</b><br><b>Solution type:</b> Mitigation<br>To disable TCP timestamps on linux add the line 'net.ipv4.tcp_timestamps = 0' to /etc/sysctl.conf. Execute 'sysctl -p' to apply the settings at runtime.<br>To disable TCP timestamps on Windows execute 'netsh int tcp set global timestamps=disabled'<br>Starting with Windows Server 2008 and Vista, the timestamp can not be completely disabled.<br>The default behavior of the TCP/IP stack on this Systems is to not use the Timestamp options when initiating TCP connections, but use them if the TCP peer that is initiating communication includes them in their synchronize (SYN) segment.<br>See the references for more information. |
| <b>Affected Software/OS</b><br>TCP implementations that implement RFC1323/RFC7323.   |
| <b>Vulnerability Insight</b><br>The remote host implements TCP timestamps, as defined by RFC1323/RFC7323.  |
| ... continues on next page ...   |

...continued from previous page...

**Vulnerability Detection Method**

Special IP packets are forged and sent with a little delay in between to the target IP. The responses are searched for a timestamps. If found, the timestamps are reported.

Details: TCP Timestamps Information Disclosure

NVT: Weak MAC Algorithm(s) Supported (SSH)

**Summary**

The remote SSH server is configured to allow / support weak MAC algorithm(s).

**Quality of Detection: 80**

**Vulnerability Detection Result**

The remote SSH server supports the following weak client-to-server MAC algorithm ↪(s):

umac-64-etm@openssh.com

umac-64@openssh.com

The remote SSH server supports the following weak server-to-client MAC algorithm
